*Nominal DOE specs at 70 EWT, 120 LWT, 80°F 100% water source

- 1. Recovery rate at 80° F source 100% water, DHW 70 EWT 120 LWT
- $\hbox{2. Water Circuit Pressure Drop and Heat Pump Cv value apply to external pump applications } \\$
- 3. Pressure drop allowed by internal circulator for external piping, at design flow rate
- 4. Sound pressure recorded 3' from unit face, 3' from ground
- 5. Cold Cycle volume is the volume below the cold trigger sensor. Cold in water over 70° F will need more volume.
- 6. Warm Cycle volume is the volume of water below the warm/recirc trigger sensor.
- 7. Tank volume is based on individual project demands, but cannot be lower than minimum value. Contact factory for accurate sizing.
